07 Q & A

Investment Highlights

A scarce specialty gas platform plus UHP services, scaling with advanced-node demand

01

Scarce technology position

One of four global manufacturers able to supply semiconductor-grade disilane, one of two with trisilane technology, and the world's largest single disilane line.

02

Total solution with HJT

Both built on in-house ultra-high-purity technology. One fab, two revenue streams – raising our share of each customer’ s spend and cross-selling opportunities.

03

Leveraged to advanced nodes

Advanced nodes demand higher material purity and chamber cleanliness, driving demand for high-end specialty gases and UHP part services; the global parts cleaning & coating market is projected to grow at ~9.5% CAGR (2026–2033).

04

Step-change in scale

"First-three-quarter 2026 revenue hit NT$2.76 billion (139% of full-year 2025), with 3Q 2026 net income jumping to 192% year-over-year."

05

Capacity coming online

Disilane and AHF expansions, an ultra-trace inspection lab and new HJT capacity in Hsinchu , Tainan, and Nanjing through 2027.

06

Local supply at the hub

Within 2 hours of Taiwan's northern and southern science parks, supporting customers' supply security and BCP.

Company Profile

TSC GROUP Chairperson **Hsiu-Lan (Doris) Hsu** Vice Chairperson **Cheng-Chien (Pedersen) Chen**

TSC

Taiwan Speciality Chemicals

Founded 2013/3/27

Capital NTD 1.477 billion

Location Changhua Coastal Industrial Park, Changhua County

General Manager Hsiung-Fei (Andrew) Chang

Employees 115+

TSC's R&D center and manufacturing facility are located in Changhua Coastal Industrial Park, a growing regional hub for fine and specialty chemicals manufacturing.

HJT

Hung Jie Technology

Founded Taiwan 2008/5; Nanjing 2016/9

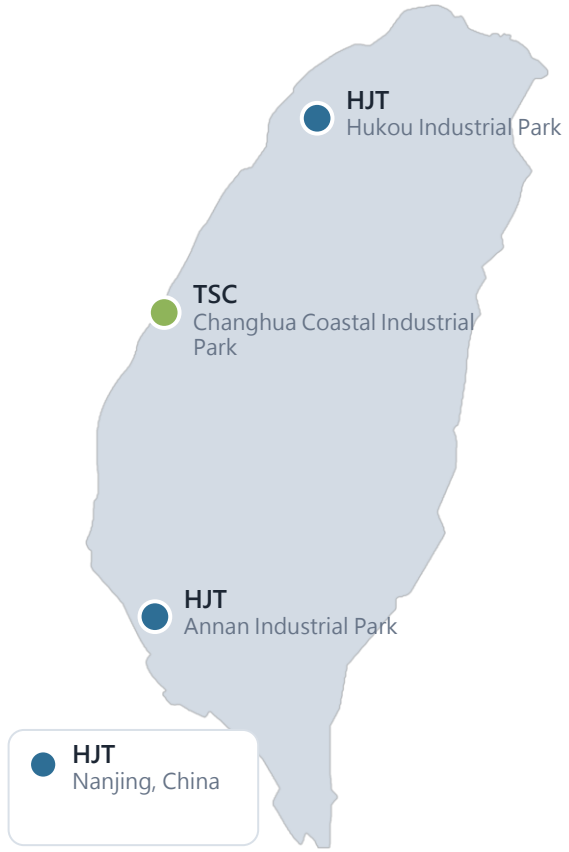

Capital NTD 0.153 billion (Taiwan) / USD 7.0 million (Nanjing)

Location Hsinchu (Hukou), Tainan (Annan) and Nanjing, China

General Manager Ting Chun Wang

Employees 450+

Service sites for UHP semiconductor component cleaning and precision processing in Hsinchu, Tainan and Nanjing, close to customers for fast, responsive support.

Milestones

Corporate & capital markets Certifications & awards Operations

2013.03 Taiwan Speciality Chemicals Corporation established

2015.03 Invention patents of Silane and Disilane manufacturing process (Taiwan) acquired

2015.06 OHSAS 18001 certified

2015.09 ISO 9001 certified

2018.06 Sino-American Silicon Products Inc. invested

2019.11 ISO 14001 & ISO 45001 certified

2019.12 The 19th annual excellent supplier award from a core semiconductor manufacturer of Taiwan

2020.03 Certified in Laboratory Quality Management System

2022.03 Initial Public Offerings issued

2022.09 Emerging Stock trading official

2023.11 Class A dangerous SEG warehouse launched

2024.06 Process line of an etching SEG completed

2024.09 Stocks listed on OTC

2025.08 Acquisition of majority stake in HJT

2019 Excellent supplier award

ISO 9001 certificate

2023 Class A SEG warehouse

2024 Etching SEG process line

2024 Listed on OTC

2025 HJT acquisition

Corporate Development Strategy

Seize Opportunities in Advanced Semiconductor Manufacturing, Create Long-Term Shareholder Value

01
Enhance Capital Efficiency
Expand operational scale and enhance long-term shareholder value

02
Leverage Process Advantages
Leverage Taiwan's advanced semiconductor manufacturing technology to explore new opportunities

03
Optimize Channel Efficiency
Leverage the "Taiwan + 1" strategy to expand market coverage & achieve rapid growth

04
Share Technology Platform
Leverage the group's advanced technologies, particularly in inspection & clean energy

05
Replicate the Growth Formula
Replicate successful strategies to achieve synergies and maximize value

Challenges and Opportunities in the Advanced Semiconductor Manufacturing Supply Chains

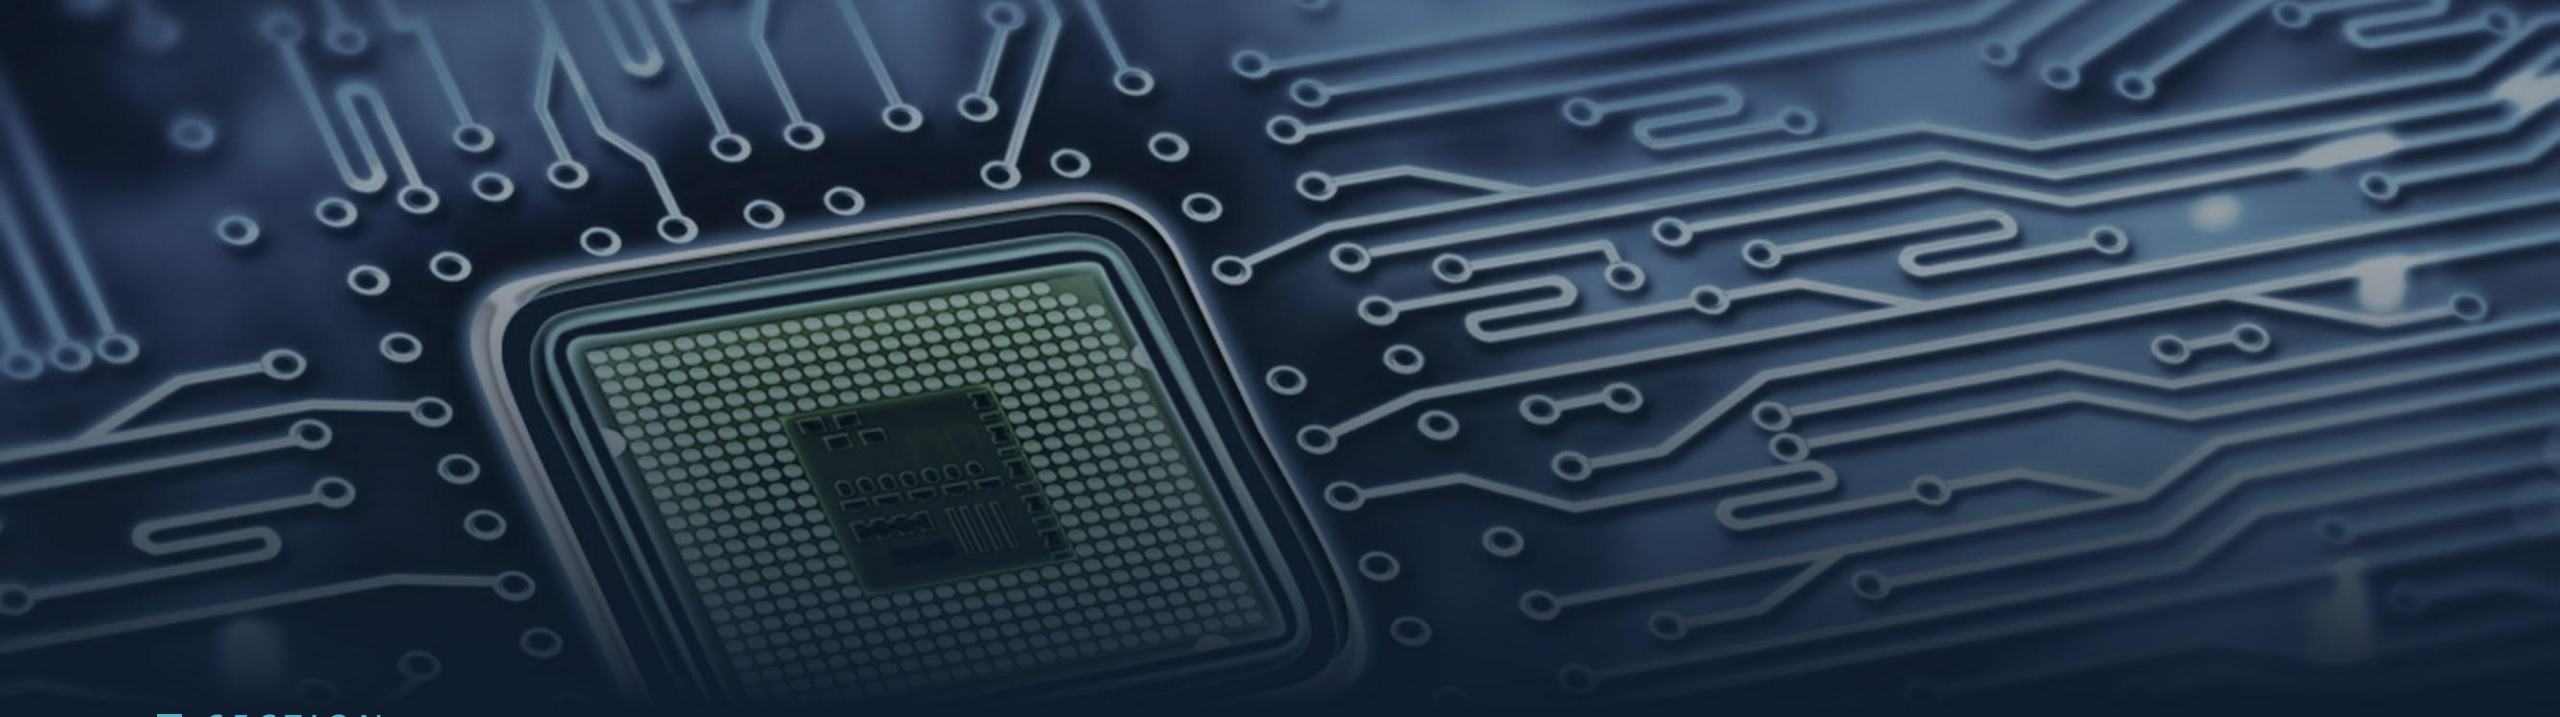

Ultra high purity
Ensure the highest purity of materials and processes

Ultimate precision
Achieve precision in manufacturing processes

Extreme cleanliness
Maintain a contamination-free environment

Utmost stability
Deliver consistent performance and reliability

- Technology differentiation
- Long-term customer relationships
- Strengthen market position

SECTION

02 Industries Overview

- Materials of Front-end Industrial Processes
- Growth in Wafer Manufacturing Material Market
- UHP Cleaning and Precision Processing Market Scale

Semiconductor Front-end Process Essential Materials

PROCESSES

Thin Film Deposition	Lithography	Etching / Cleaning	CMP	Packaging
MATERIALS				
High purity SiC materials / Wafers	UV Photoresist	Wet etching chemicals	CMP slurries	Chip packaging materials
Ion implanting materials	DUV Photoresist	**Dry etching specialty gases**	CMP pads	Fluorineless chemicals
CVD specialty gases	EUV Photoresist		CMP (diamond) disks	Polyimide & monomers
ALD precursors	Photoresist peripheral materials		Post CMP cleaning agents	
Metal oxide	Developer and Stripper			

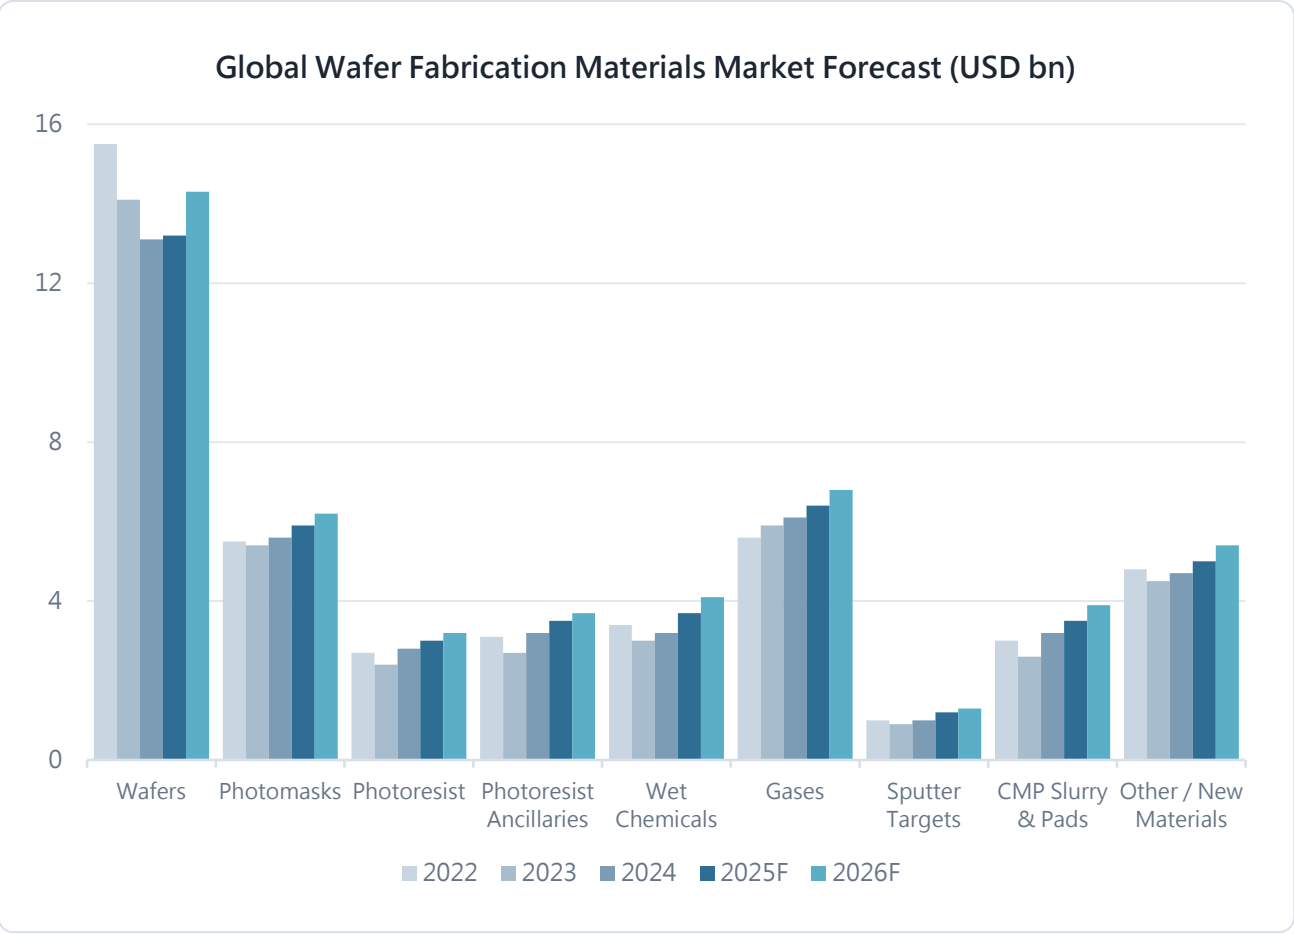

Reference: BUSINESS NEXT

TSC-related materials

Essential materials: high-grade SiC materials/wafers, **CVD specialty gases**, **ALD precursors**, photoresists & peripheral materials, **dry etching specialty gases**, CMP materials, packaging & insulation materials

Wafer Manufacturing Material Market Growth

Market Value Trends and Market Size Forecast by Material

Material type (USD)	2025	2026	Growth	Factor
Specialty and bulk gases	6.4B	6.8B	~ 7%	Steady growth
Electronic specialty gases	4.5B	4.8B	~ 7.25%	Steady growth
Wafers	13.2B	14.3B	Slow recover	Largest proportion
Wet chemicals	3.7B	4.1B	~ 16%	Strong demand
Photoresists	5.9B	6.2B	Steady increase	Strong resilience
CMP materials	3.5B	3.9B	Steady increase	Advanced processes

Two long-term growth drivers for specialty gases

1. **Node migration:** More advanced nodes (3nm, 2nm, GAA) require more process steps per wafer, driving higher specialty gas consumption per wafer.
2. **Global fab expansion:** New fabs across Taiwan, the US, Japan, Korea and China are significantly increasing total wafer capacity.

Source: SEMI, Materials Market Data Subscription (MMDS), July 2025

UHP Cleaning & Precision Processing Market Scale

HJT's outlook & growth drivers: capitalizing on the wave of advanced process expansion, HJT achieves leapfrog growth driven by key technologies and capacity scaling.

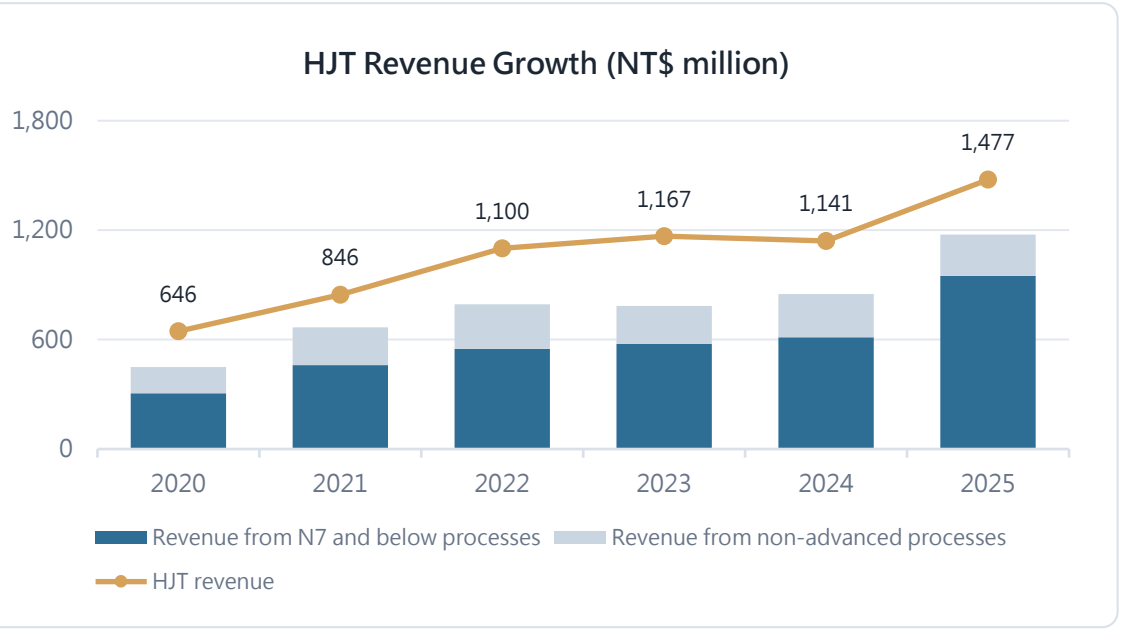

17.9%
HJT 2020–2025 revenue CAGR

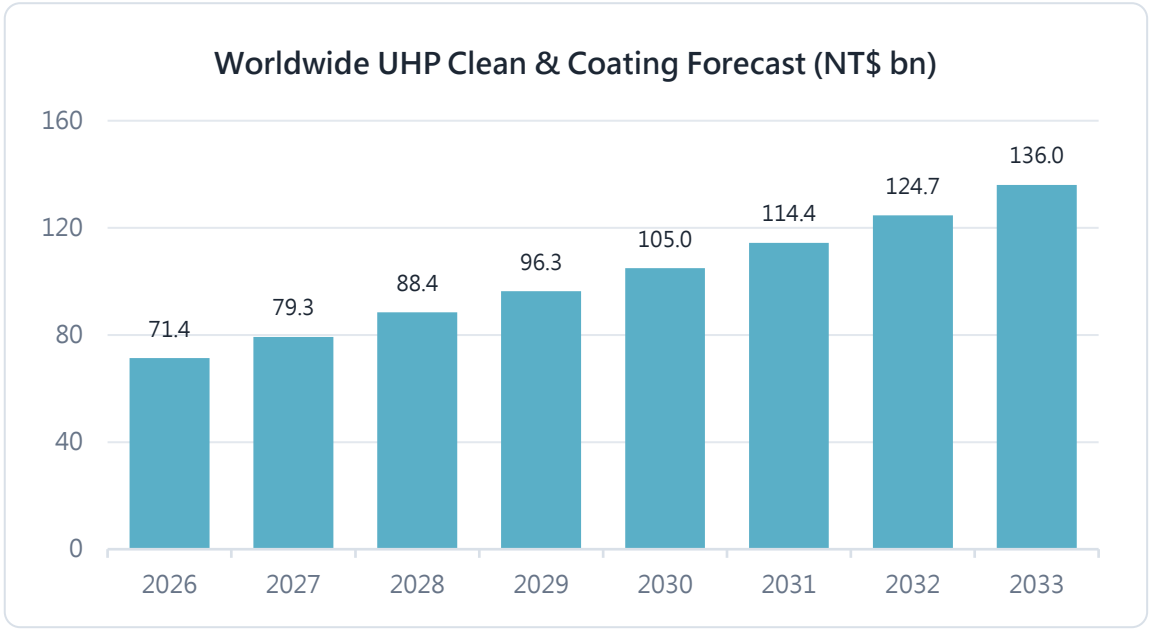

64%
HJT revenue contribution by customer (2025) from advanced process technologies below N7

9.5%
Global semiconductor parts cleaning & coating market CAGR, 2026–2033

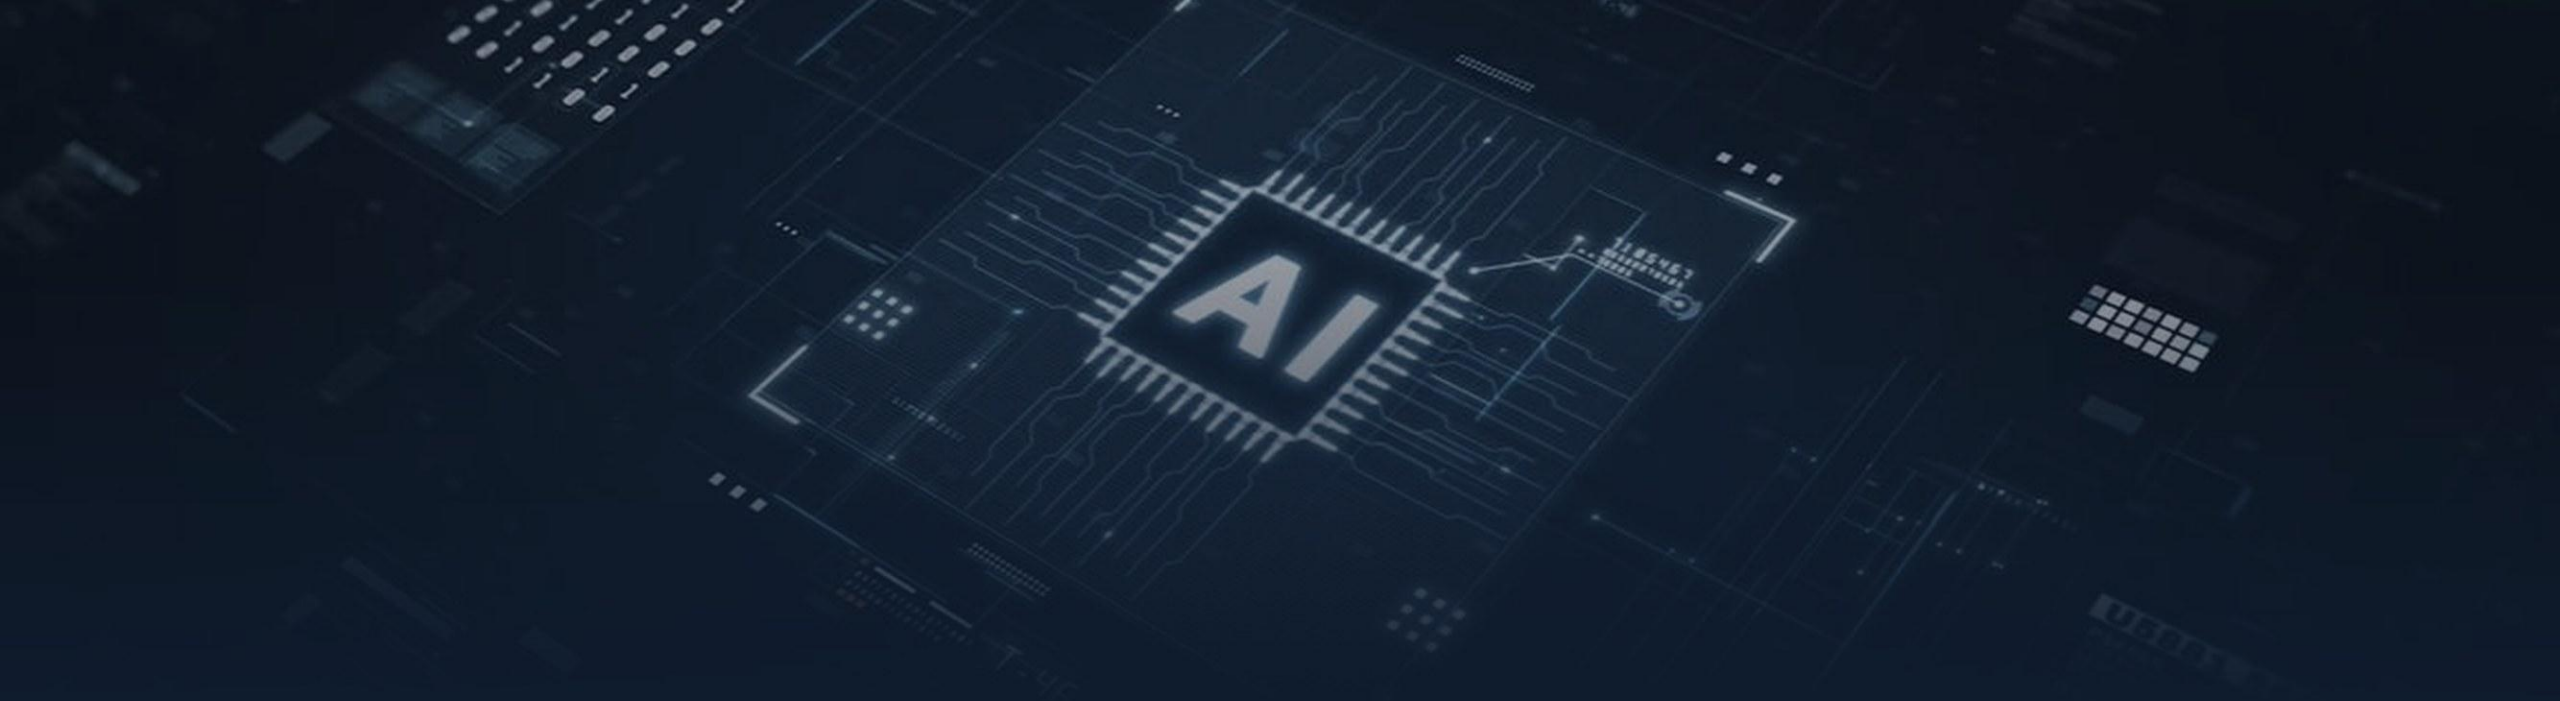

HJT targets growth that outpaces industry CAGR, powered by key growth drivers:

- Advanced semiconductor processes
- Memory
- Advanced semiconductor packaging

Source: VMR, Ultra-high Purity (UHP) Semiconductor Chamber Parts Cleaning and Coatings Market Size, Industry Development & Forecast. Advanced-node share of HJT revenue: 47% (2020) → 64% (2025).

SECTION

03 Operation

- Product Category

Product Category

Diversified in-house product portfolio, deepening UHP cleaning and parts technical services

01

Manufactured Products

In-house products

- **Disilane (Si_2H_6)**
  High-purity in-house formulation technology
- **Trisilane (Si_3H_8)**
  Thin-film technology for advanced processes
- **Anhydrous HF (AHF)**
  Key material for advanced thin-film deposition

02

Distribution & Agents

Domestic & overseas distribution

- **Silane (SiH_4)**
  Domestic distribution and safe transfilling
- **Various specialty gases**
  Diversified, flexible supply chain

03

Advanced Materials R&D

New product development

- **ALD / CVD precursors**
  Next-generation materials for advanced-node deposition
- **Advanced coating materials**
  Plasma-resistant specialty coatings

04

UHP Parts & Tech Services

Semiconductor parts & technology

- **Advanced-process parts cleaning**
  Ultra-high-purity (UHP) grade standards
- **Advanced-process parts coating**
  Patented coatings extend part lifetime
- **Advanced-process parts repair**
  Precision refurbishment and assembly services

Operating Income %	40.77%	45.64%	-4.87%
Net Profit	**865,118**	451,338	91.68%
Net Profit %	31.32%	40.23%	-8.91%
EPS (1)	**NT$4.48**	NT$2.69	NT$1.79
ROE (2) (annualized)	**24.7%**	16.5%	8.2%
ROA (3) (annualized)	**15.4%**	11.6%	3.8%

(1) Earnings per Share (EPS) = Net Income Attributable to Common Shareholders / Weighted Average Shares Outstanding
(2) Return on Equity (ROE) = Net Income / Average Shareholders' Equity
(3) Return on Assets (ROA) = ((Net Income + Interest Expense × (1 – Effective Tax Rate)) / Average Assets)

Consolidated Revenue

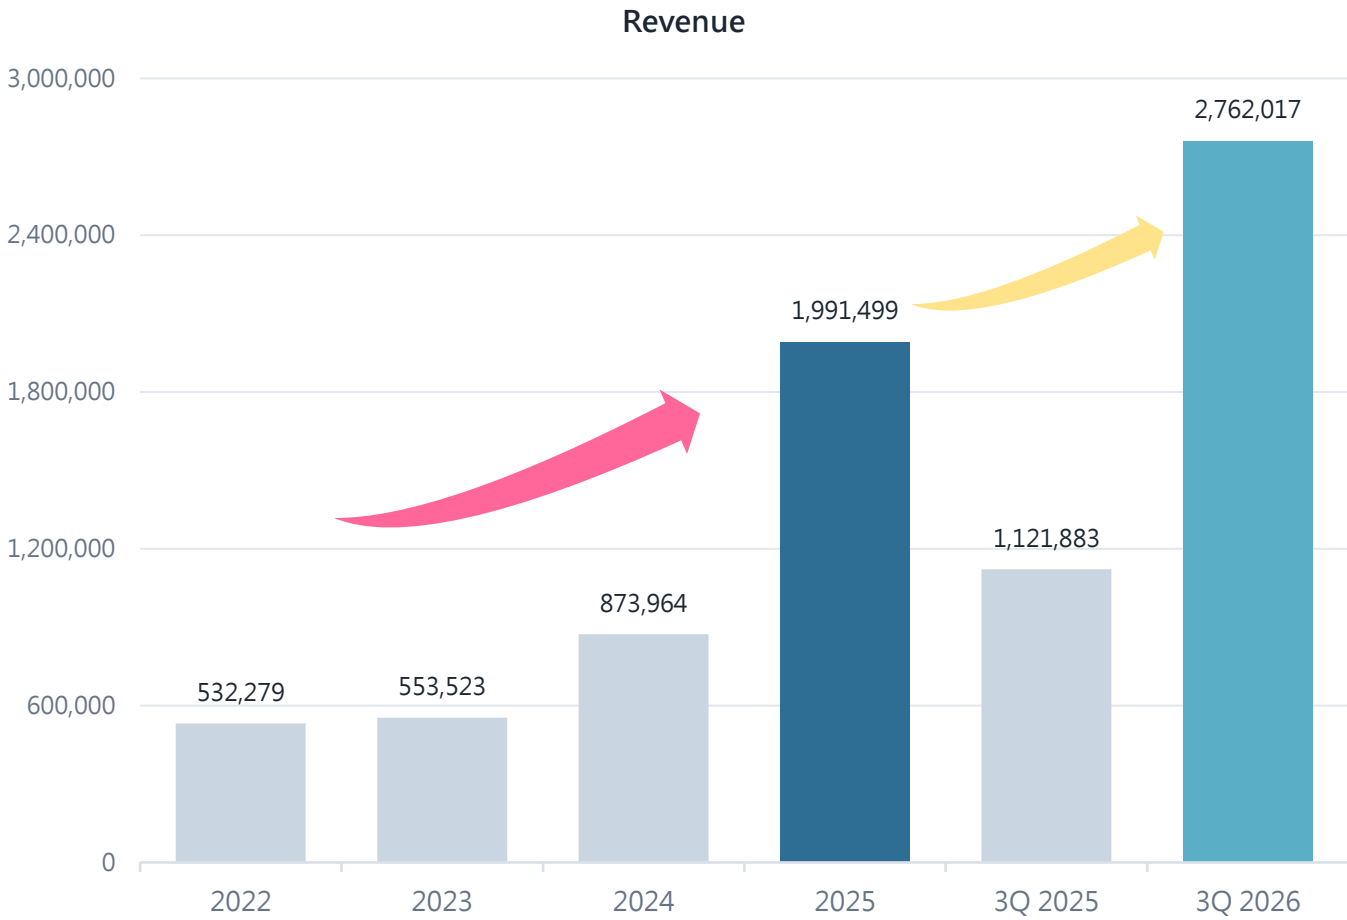

M&A-Driven Growth: Operating Scale Reaches New High

Strategic M&A Strategy

- June 27, 2025, Acquired a 65.22% equity stake in Hung Jie Technology.
- Investment amount approximately NT$3.0 billion.
- Hung Jie Technology has been included in the consolidated financial statements since August 2025.

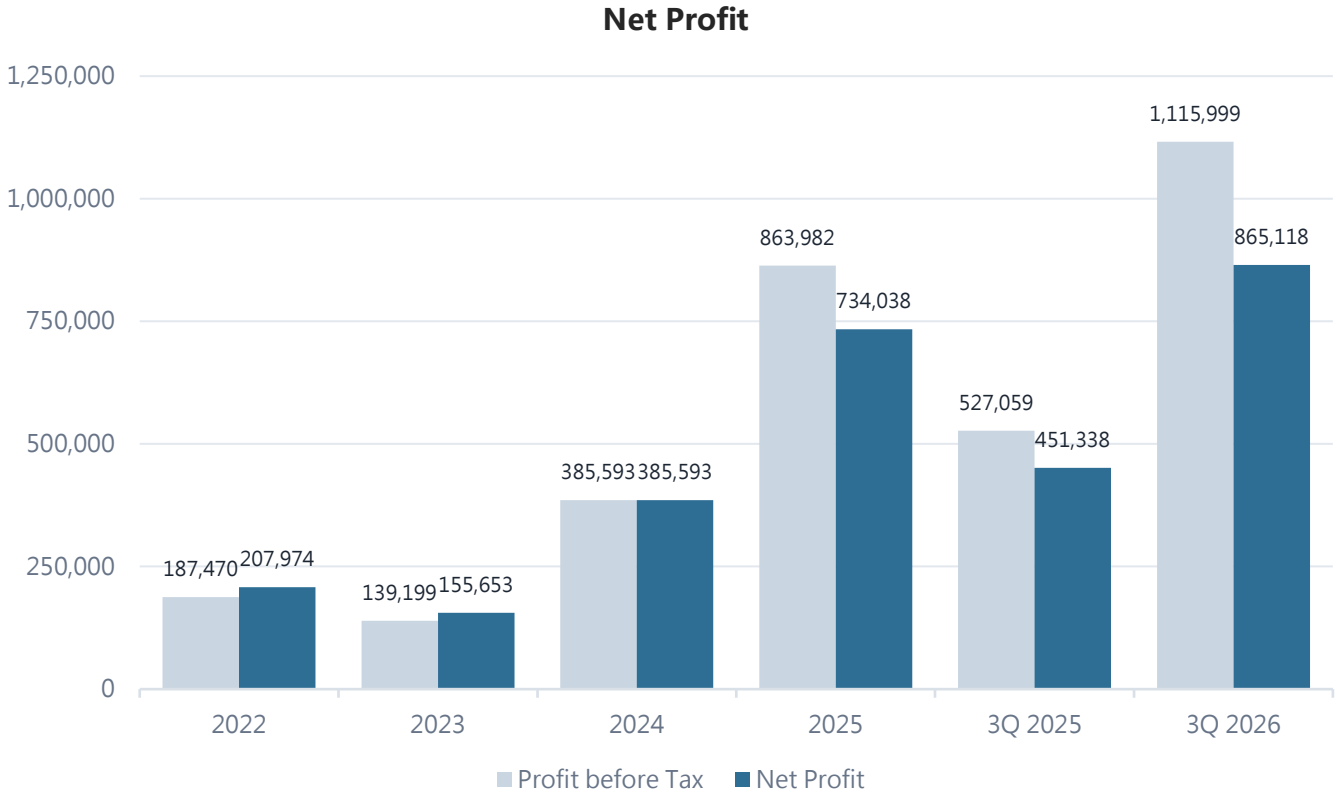

NT$ 2.76 billion

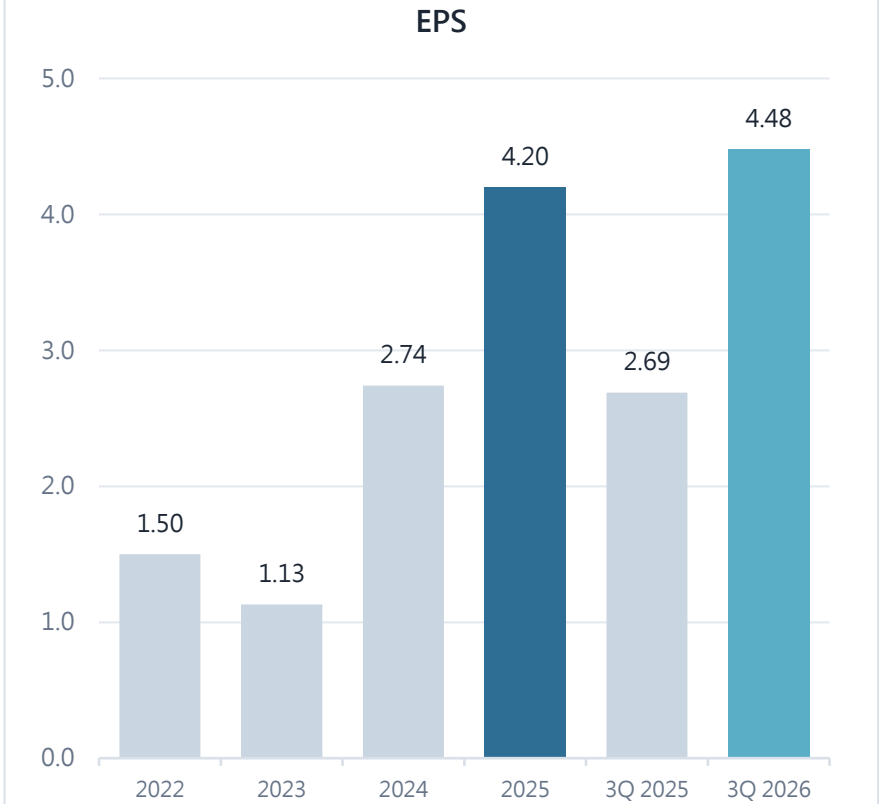

Revenue for the first three quarters of 2026 reached NT$2.76 billion, equivalent to 139% of full-year 2025 revenue, highlighting strong business growth and operational momentum.

Net Profit & EPS

3Q 2026 delivered strong earnings growth, with net profit after tax and EPS reaching 192% and 167% of the respective figures in the same period last year.

Q3 2026 consolidated net profit attributable to owners of the parent company reached NT$661.313 million.

SECTION

05 Core Technology & Competitiveness

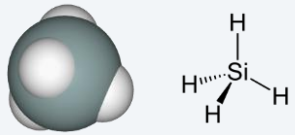

- Products and Services
- Professional Competitiveness
- Sales Network
- Localization Advantages
- Unique Advantages

Product Specifications

- TSC has complete technologies of synthesis, purification, transfilling, and quality analysis of silane products, and is one of the four global manufacturers that can supply semiconductor grade disilane.
- TSC owns the largest capacity of a single disilane manufacturing line in the world.
- TSC is one of the two global manufacturers possessing technologies of trisilane.
- TSC's new product – anhydrous HF is a monopolized SEG by foreign suppliers.

Silane

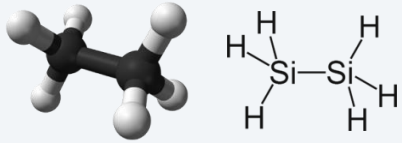

SiH_4 · Silane · 甲硅烷

- Commonly utilized as raw material for the Si-thin film deposition in optical display panel fabrication, and also applied in the Si-based epitaxial thin film in mature semiconductor fabrication processes.

Disilane

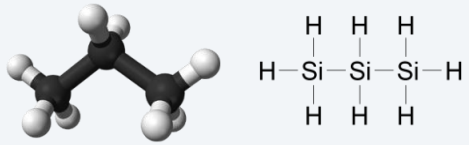

Si_2H_6 · Disilane · 乙硅烷

- Applied in advanced semiconductor fabrication process for epitaxy dielectric Si-based thin film on electronic circuits.
- Better application properties than silane in the formation of thin film density, surface roughness, deposition rate, and thermal budget allowance.

Trisilane

Si_3H_8 · Trisilane · 丙硅烷

- Properties and applications are similar to the lower silanes.
- Possesses better application properties, and is considered to be the key Si-based epitaxial raw material of the next generation.
- Actual application in one of the Tier 1 foundry company's fabrication.

Anhydrous HF

AHF · Anhydrous hydrogen fluoride

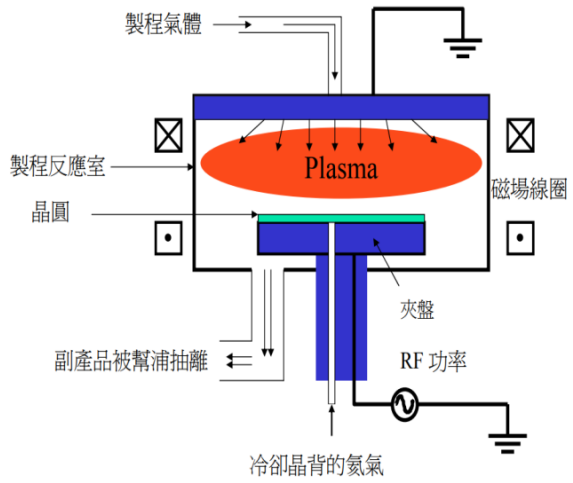

- HF is an important SEG to advanced semiconductor dry etching process and tool cleaning, mainly for thin film layer etching, CVD tool chamber cleaning and silicon deposits removal.
- AHF provides better traits of volatility and isotropy compared to HF solution for application in foundry processes of finer nodes.

UHP Cleaning & Coating Introduction

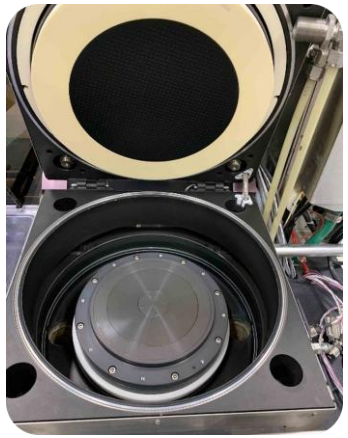

Why chamber parts need cleaning and coating

Plasma chamber schematic

Etching gases

CF_4, C_4F_8, CHF_3, Cl_2, SF_6, BCl_3, O_2, Ar, aHF...

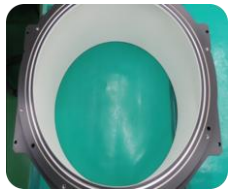

Etching chamber

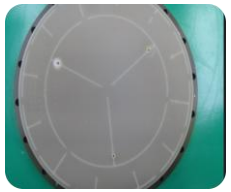

Key consumable parts inside the chamber

噴淋頭 Shower head

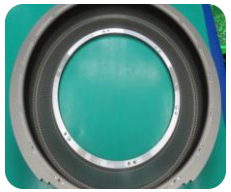

腔室內襯 Chamber liner

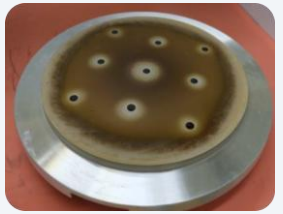

靜電吸盤 ESC

墊圈 Ring

反應室排氣 Exhaust

Reactions simultaneously occur during etching process on the workpiece:

1. Surface corrosion
2. By-product deposition

→ cause process instability and defect generation

1 Solution 1: UHP cleaning

- Surface by-product removal
- Corroded surface restoration

2 Solution 2: Plasma-resistant coating

- High-strength ceramics resistant to plasma
- Chemically resistant ceramic layer reduces surface reactions
- Coating can be removed and re-applied to extend workpiece service life

Professional Competitiveness

Core competencies in specialty gas technology

01

Core technologies with comprehensive patent protections

Multiple patents achieved in US, China, Korea & Taiwan

02

Largest capacity of a single disilane production line

Industry-leading single-line scale for high-purity disilane

03

Co-product process and technology

Integrated multi-product production process

04

Fluorine-based etching specialty gas cylinder & coating 12N ultra-clean technology

Ultra-clean technology for high-purity delivery

05

Si-based special gas production and operational technologies know-how possessing

The only manufacturer with production technologies of 4 different silicon hydrides

06

World top semiconductor companies' recognition and product approval

Approval by global tier 1 chip foundry companies

07

Environmental friendly and energy-saving production process

Established competitiveness for the carbon neutrality

08

Domestic halogen etching specialty gas production & supply

Established local cooperative production technologies and supply service of regulated AHF chemicals

Professional Competitiveness

HJT: one-stop solution for ultra-high-purity processes

Competitive advantages

Items	HJT
2 sites in Taiwan	✓
Multi-OEM equipment coverage	✓
APS coating localize / customize	✓
SPS coating localize / customize	Customize · R&D
Coating / ESC / Showerhead one-stop service (Clean-Renew-New)	✓

Standardized Automation
UHP Cleaning

- Automated robotic CO_2 cleaning & polishing
- Multi-site capacity in Hsinchu & Tainan

Precision & Versatility
Plasma-resistant Spray Coating

- Plasma-resistant coatings (APS / SPS)
- Localized & customized solutions

Professional One-stop Service
Component Refurbishment

- ESC repair
- Showerhead repair

Advanced Innovative Technical Service
Product Development

- Coating solutions for multiple OEM platforms
- Metal & non-metal component coverage

Comprehensive Precision
Inspection & Analysis

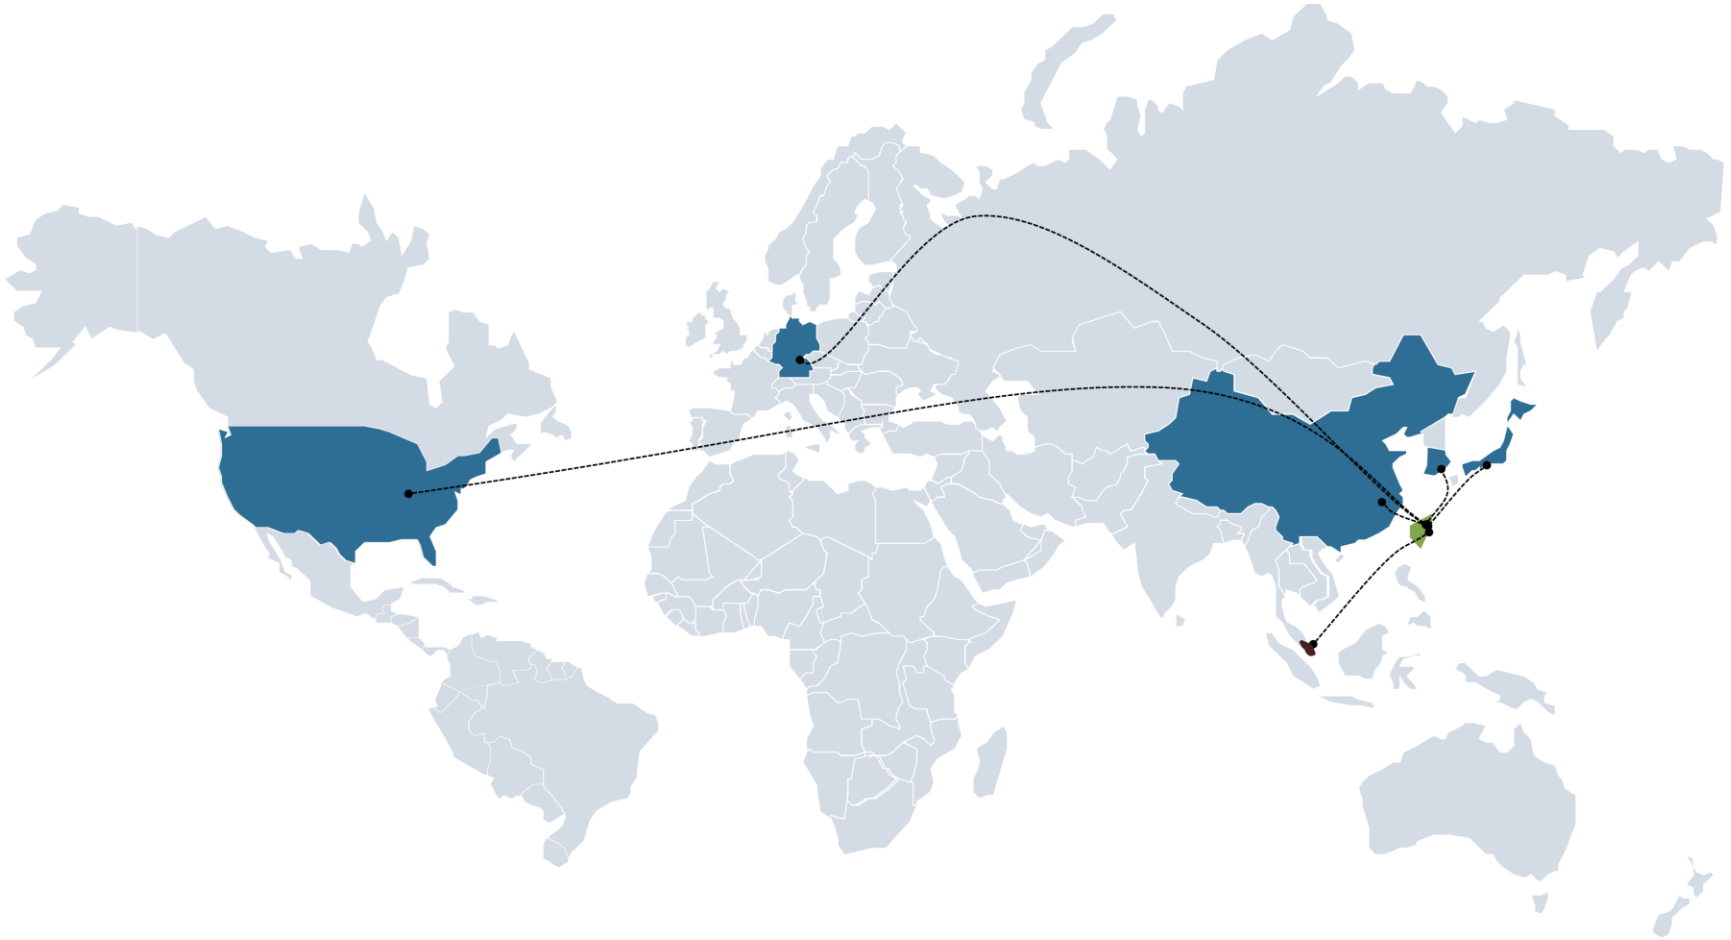

- Advanced non-destructive inspection
- Precision measurement & failure analysis

TOTAL SOLUTION
AI Factory

HJT is capable of refurbishing equipment from multiple OEMs and various component types, with two localized facilities in Hsinchu and Tainan.

Sales Network

6

countries

Products have been distributed to 6 countries in the world.

- Taiwan (TSC)
- Export destinations

Localization Advantages

Local distribution

1. TSC is at the midpoint to the semiconductor technology and industry belt in western Taiwan, as well as the global semiconductor industries.
2. Location advantage that the northern and southern semiconductor industrial agglomerations are both close, so TSC and HJT provide faster and closer product support and service to our clients.
3. Local and domestic supply can effectively avoid risks caused by geopolitics and climate change, and is the first choice to comply with customers' business continuity plans (BCP).
4. Compared to imported special gas products, TSC's products hold beneficial advantages in carbon footprint and border tax reduction.
5. TSC is within 30-minute driving distance of the closest freight port – Taichung Port and within 2-hour driving distance to the northern and southern semiconductor industrial agglomerations (science parks).

Unique Advantages

01

The comprehensive global sales network of the GlobalWafers Group

02

Located at the hub of the global advanced semiconductor manufacturing cluster

03

Accumulated solid self-R&D of fine and precision specialty gas materials and production technologies

04

Experience and know-how of international logistics and handling of specialty gases and hazardous chemicals

05

Own special industrial land for production development

06

Hold vendor codes and certification to multiple global tier-1 semiconductor manufacturing customers for speeding up new product promotion and evaluation

SECTION

06 ESG

- Environment
- Society
- Governance

Environment

TSC pays close attention to subjects of energy conservation and sustainability

Photovoltaic systems

Phase 1
Completed in 2021/7

Phase 2
Completed in 2022/9

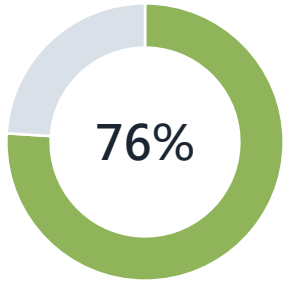

Phase 3
Completed in 2024/12

Power Generators
PV modules

Converter Equipment
DC/AC inverters

Self-consumption
Integrated into plant power panels

TSC
Green electricity generated is reached to 76% of TSC's electricity consumption.

Percentage of green electricity generation vs. annual electricity consumption

21%

HJT
Green electricity generated is reached to 21% of HJT's electricity consumption.

Environment: Smart Automation

ESG highlights | Smart automation driving safety, efficiency and low carbon

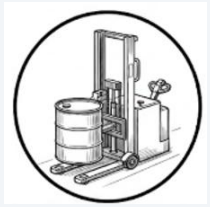

Chemical Automation

Automated Acid Supply System

Safety: Automated acid supply and discharge greatly reduce the risk of chemical leakage and personnel exposure.

Precise control: Metered automatic dosing reduces waste liquid and chemical waste.

Green operations: Higher acid utilization efficiency, in line with environmental (E) and occupational safety (S) standards.

Handling Automation

Self-propelled Electric Acid Drum Handler

Zero-carbon handling: Fully electric drive enables zero-emission in-plant logistics.

Ergonomics: Replaces manual handling of heavy chemical drums, eliminating musculoskeletal strain risks.

Smart safety: Automatic clamping and stable transport reduce spill hazards caused by sudden shaking.

Process Robotics

Automated Physical Polishing Robot Arm

Precision polishing: Robot arm with dedicated polishing pads significantly improves processing yield and consistency.

Health protection: Automated isolation of polishing dust protects staff from respiratory and physical harm.

Cleaning Automation

Automated Cleaning Equipment

Maximum safety: Eliminates splash risks from manual immersion.

Consistent quality: Precise control of process time and chemical ratios.

Efficiency: Automated handling raises productivity and reduces human error and collisions.

Upgrading processes through automation – balancing environmental efficiency and operational safety on our path to smart manufacturing

Society

TSC has established an ESG committee for promoting and implementing annual objectives: returning to society the resources taken

Resource regeneration

Make compost from kitchen waste for plantation to annually reduce 1,800 kg of food waste.

Disadvantaged social group care

Prepared epidemic prevention goods for nursery institution for epidemic prevention contribution.

Beach cleanup

Promote beach cleanup events for nature protection.

Reuse and recycle

Perform garbage classification and recycling and donate recycling to Tzu Chi, reducing 1,500 kg of garbage annually.

HJT leverages corporate influence to fulfill corporate social responsibility

Charity fundraising sale

Organizing Mid-Autumn Festival and Christmas charity sales events and encourages employees to participate in charitable donations.

Supply donation

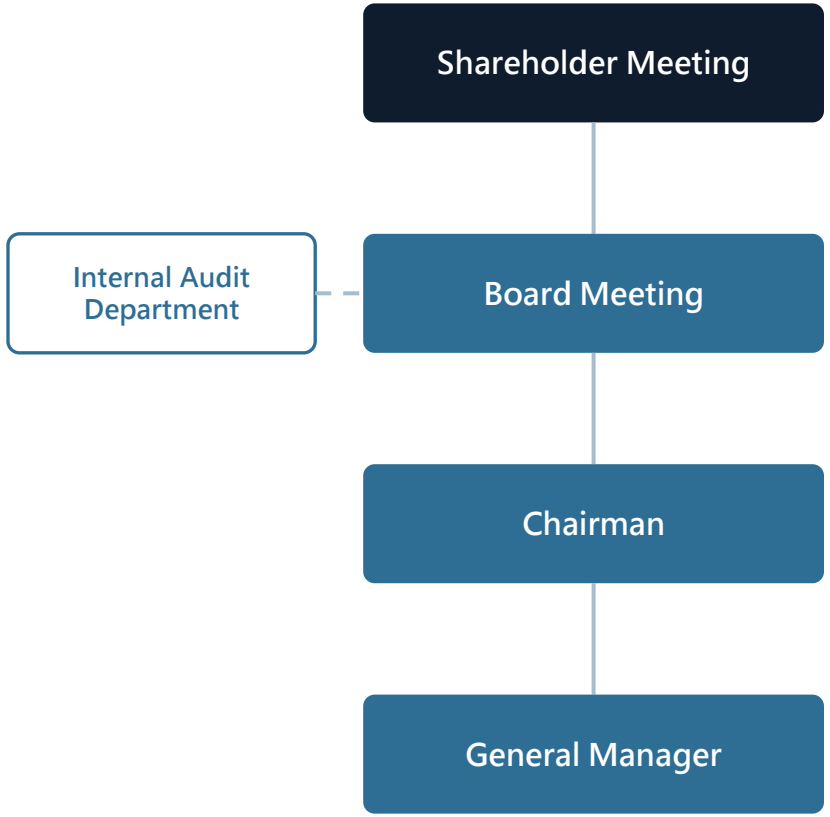

Donating supplies to support post-disaster reconstruction of the Matai'an River landslide-dammed lake area in Hualien.

Governance

Implementation of Corporate Governance

Independent directors exceed 1/3 of directors	Independence of the Board of Directors
Female directors account for more than 1/3 of directors' seats	Pay attention to gender equality
Internal control audit	Continuously evaluate the effectiveness of internal controls to promote sound business operations
Whistleblower system	Report illegal infringement and protect the rights of whistleblowers

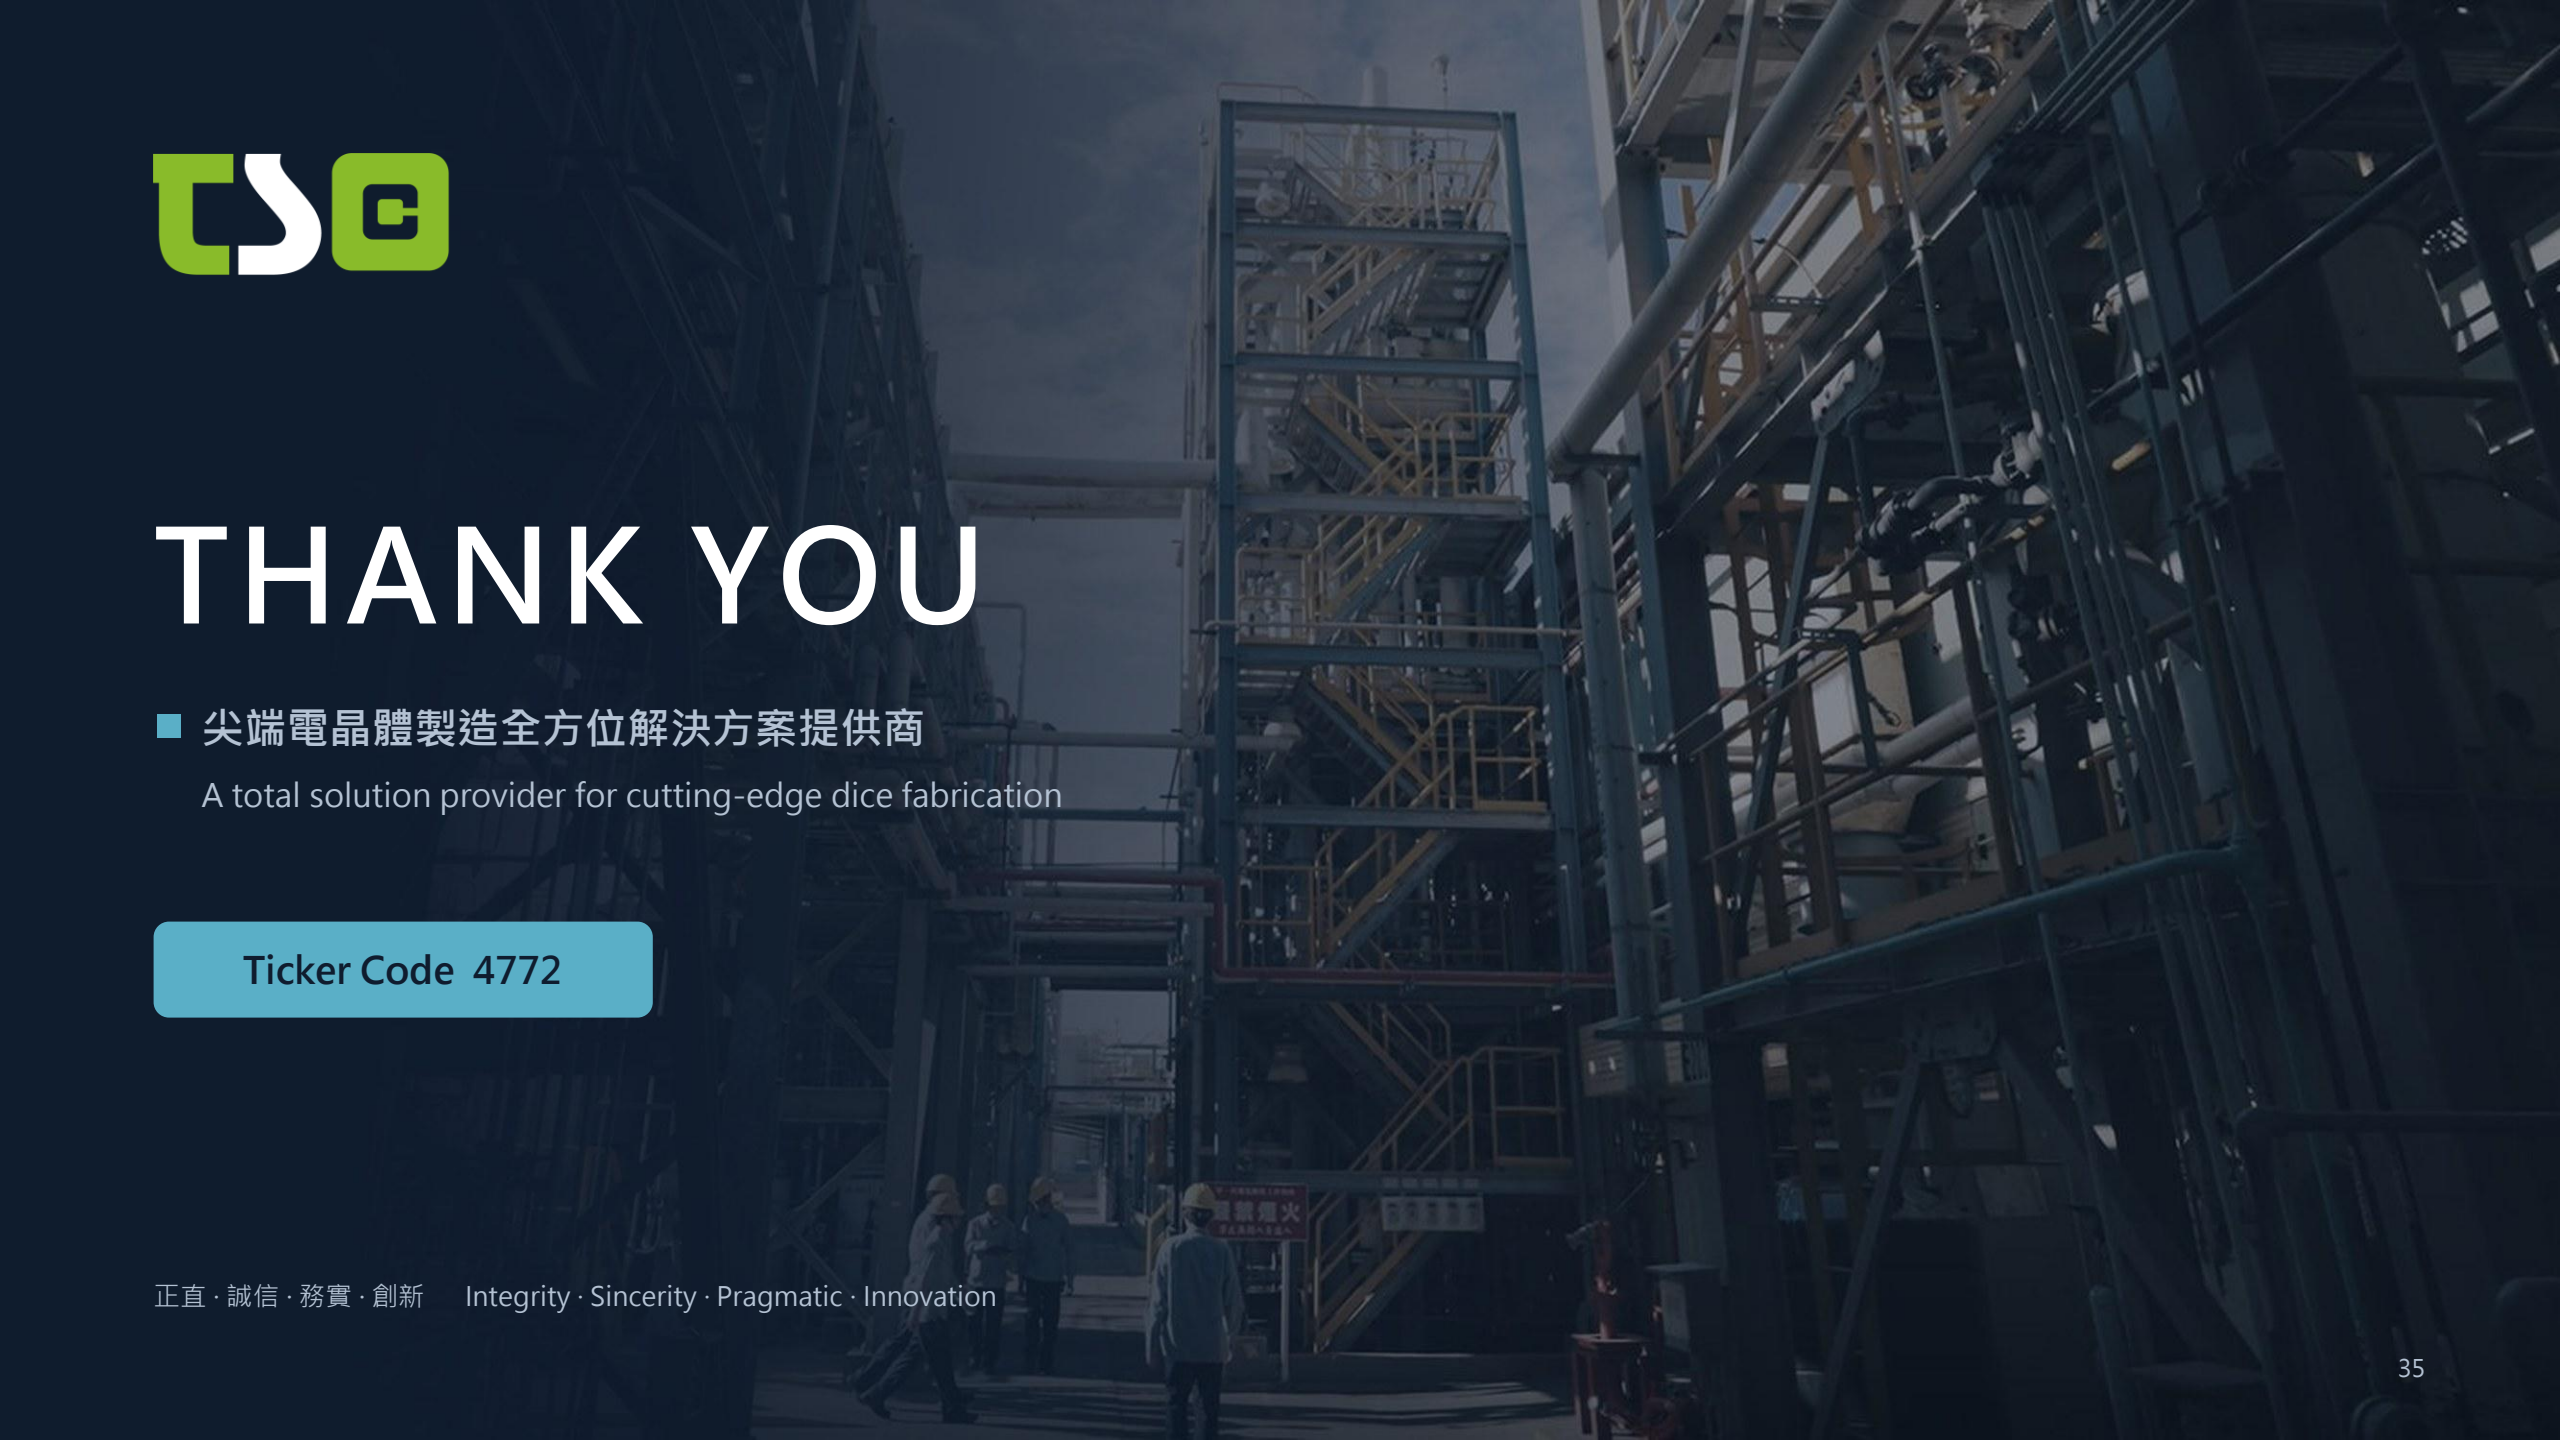

Governance structure
